

Different Effects For Foto Flexer

The Basic Tab:

1. to get to the basic effects you will need to go to the first tab once you start to edit your picture.

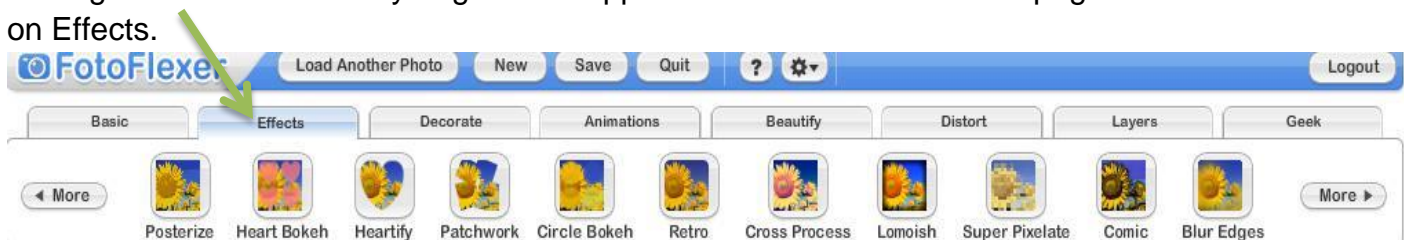

You can do many things in the basic editing tab:

- You can auto fix your picture and also fix the red eye.
- Crop your pictures and copy a region so that if you wanted to copy a part of the picture and place somewhere else in that picture you could.
- Next, you can resize your picture to make it either bigger or smaller.
- Then you could rotate or flip your picture.
- Adjusting your picture with the Adjust button lets you do a lot of things. First you could adjust the hue settings, next you could adjust your pictures saturation, lastly you could adjust the lightness or darkness of your picture.
- The contrast lets you do two things, adjust your contrast and brightness.
- EZ Collage can let me make a collage out my picture and many other pictures.

The Effects Tab:

1. To get to the Effects tab you go to the upper left-hand side of the web page and click on Effects.

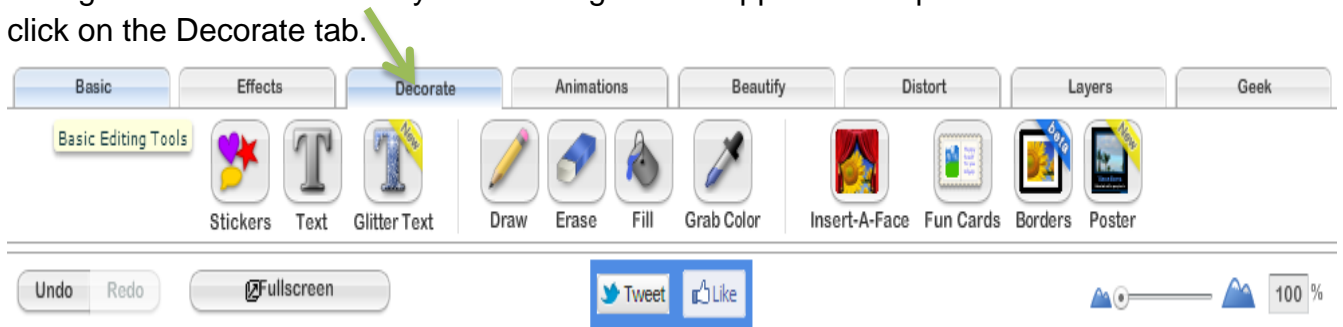

In the Effects tab you can make your picture look like anything from a bunch of hearts collaged together to making it look like a cartoon. Here are a few examples of what you can do to your picture with this tab:

- Posterize: make photo look like it has little or lots of detail, or even little or lots of color.
- Heart Bokeh: add opaque hearts on to your picture to make it look like their are hearts floating around.
- Heartify: make it look as if your picture is made out of hearts.
- Painting: your picture will look like it was painted.
- Neon: this effect will make your picture look like a neon light.

The Decorate Tab:

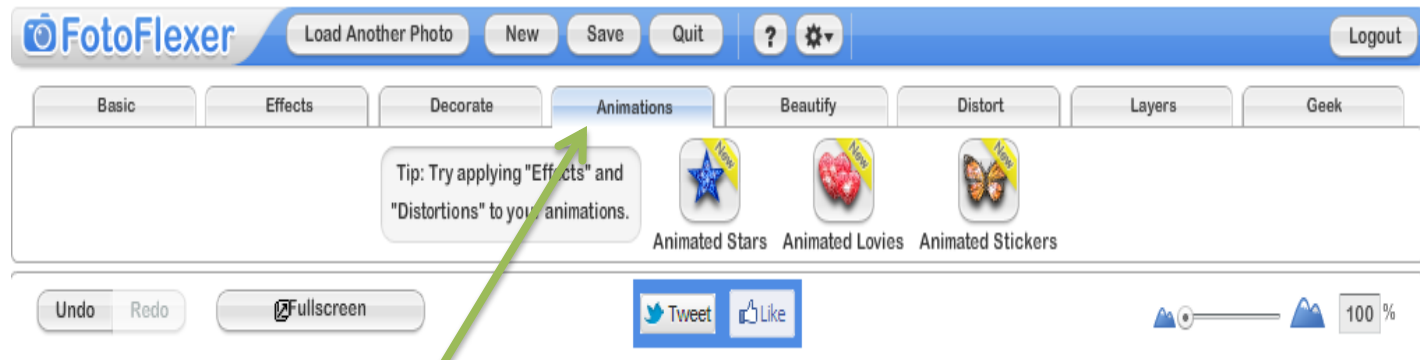

1. to get to the Decorate tab you need to go to the upper middle part of the website and click on the Decorate tab.

The decorate tab lets you add on the following effects:

- Stickers: You can click on a category of stickers that you would like to add to your picture then it will take you to a variety of sticker that you can choose from. You can rotate or resize the sticker to your liking.
- Text and Glitter Text: With these two effects you can choose your font and color of the text then add it on your picture. The only difference between Text and Glitter Text is that the Glitter Text is made of glitter.
- Draw: choose the thickness of your brush and also the color, then draw anything on your picture.
- Erase: erase anything that you drew with the Draw tool.
- Fill: You fill any space or line on your picture with this tool.
- Grab Color: you can click on any part of your picture and grab that color then go back to draw or fill and draw with that color.
- Insert-A-Face: you can only use this effect when you have a picture with a face in it. You click on the center of the face's nose and it will take that face and you can insert that face in another picture with empty faces.
- Fun Cards: you can only use this effect when you have a picture with a face in it. You do the same things as what you would do when you do an insert-a-face and you can create your own holiday card.
- Borders: add any border to your picture.
- Poster: make your picture into a poster and customize your title and description by typing in what you want as your title and body. You can also choose the color you want your words to be.

The Animations Tab:

1. to get to the animations tab you go to the upper middle part of the website and click on Animations.

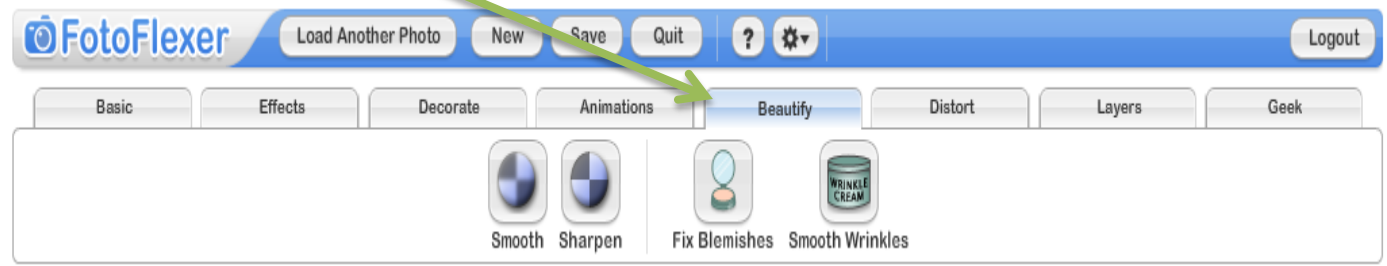

What all can you add to your picture with the Animations tab:

- Animated Stars: gives you a variety of stars to choose from to add to your photo that look like they are shining.
- Animated Lovies: gives you animated hearts to choose from that look sparkly.
- Animated Stickers: Miscellaneous stickers to choose from including
 - spring stickers
 - costume stickers
 - snowflake stickers
 - eyes stickers
 - wings stickers
 - gift stickers
 - misc. stickers

(you can go back to the distort and effects tabs and try these effects on the stickers)

The Beautify Tab:

1. to get to the Beautify tab you need to go to the tab that is one of the center tabs on the right called Beautify.

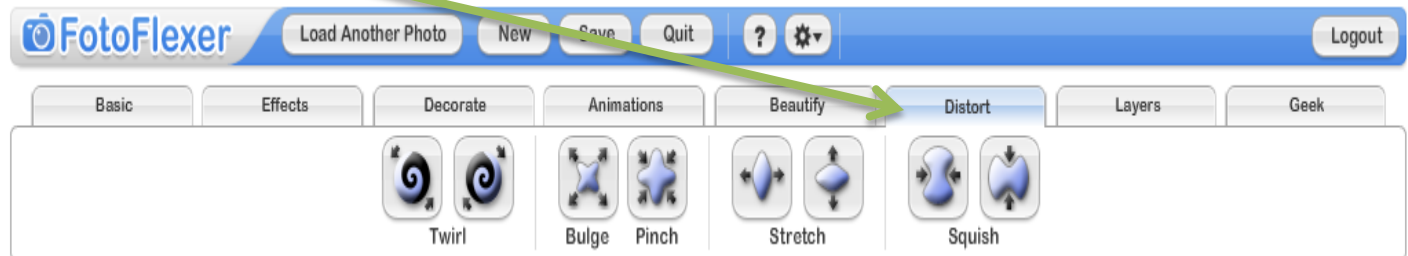

What does the Beautify tab do:

- Smooth and Sharpen: these two effects can either smooth your picture if you feel that it is too sharp or you can sharpen it if you feel that it is too smooth.

- Fix Blemishes: this can make you look like you have no pimples or blemishes.
- Smooth Wrinkles: this can take away all of your wrinkles.

The Distort Tab:

1. to get to the Distort tab you need to go to the upper right hand corner and click on Distort.

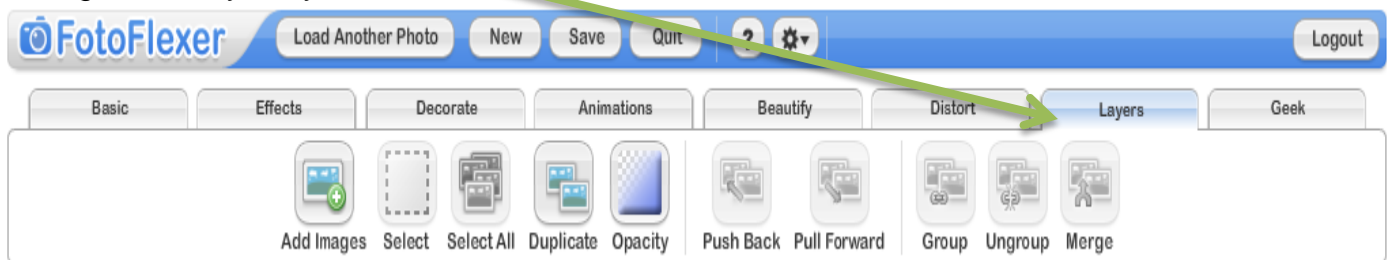

The distort tab can do make your picture look like a whole new picture:

- Twirl: this effect will twirl your picture in the space where you click. You can choose the size of the twirl and also how strong or weak the twirl is.
- Bulge or Pinch: when you are in this effect and click on your picture you can make that part of the picture bigger or smaller.
- Stretch: you can stretch the part of the picture that you click on.
- Squish: when you click on any part of your picture it squishes that part of the picture.

The Layers Tab:

1. to get to the Layers tab you need to go to the tab that is the second one furthest to the right that says Layers on it.

There are many different features on the Layers tab that you can edit your photo with:

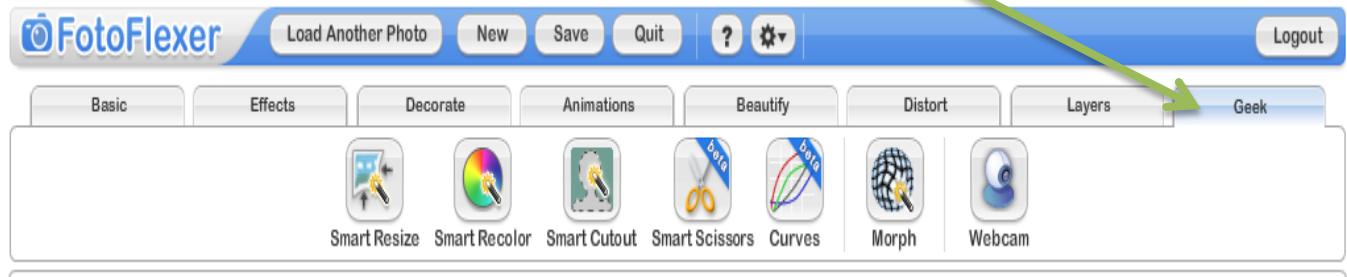

- Add Images: this lets you add any image to your other image and lets you move both images around to let you place it where you want it to go.
- Select: this lets you select any part of your photo.
- Select All: select all can select all of your photos that you have added on to your original photo including your original photo.
- Duplicate: you select the photo that you want to duplicate then press duplicate and it will make another copy of the photo.
- Opacity: you can choose how opaque your picture is.

-Push Back and Pull Forward: when you press either push back or pull forward it will make the picture that you have selected either go in front of the other pictures or go in back of the other questions.

-Group, Ungroup, and Merge: Group and Ungroup make your pictures either be one whole picture together or be two separate pictures while merge takes all your pictures and makes it one whole picture.

The Geek Tab:

1. the Geed tab is the tab furthest to the right of all the other tabs.

What does the Geek tab do:

- Smart Resize: this will let you widen your photo or make it longer without distorting it.
- Smart Recolor: this will let you select what area you want to recolor then lets you select the color that you would want it to change to and it will change it for you.
- Smart Cutout: smart cutout will let you pick what areas you want to keep and what areas you want to delete and will delete it for you.
- Smart Scissors: this will let you connect points around the area you want to cut out and will cut it out for you.
- Curves: will let you curve the line and as you curve the line it will change the color of the picture for you.
- Morph: you need two or more photos to do this effect. This effect will morph together your two photos.
- Webcam: if you have a webcam then you can go onto your webcam and morph your face and then take a picture to add to your other pictures.
